

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claim 1-15 (cancelled)

Claim 16 (new): A system for processing visual information, comprising:
a plurality of cameras for recording visual information,
a control room in communication with the cameras and having means for displaying recorded visual information, and
control means for influencing the information display in the control room,
wherein the system is also provided with storage means for storing the operations performed with the control means.

Claim 17 (new): The system as claimed in claim 16, wherein the storage means are adapted to store the operations performed with the control means in combination with at least a part of the visual information displayed as a result of the operations performed with the control means.

Claim 18 (new): The system as claimed in claim 16, wherein the control room is also provided with communication means and the storage means are adapted to store the operations performed with the communication means.

Claim 19 (new): The system as claimed in claim 16, wherein the system is also provided with input means for supplying to the storage means an identification of an operator of the control means.

Claim 20 (new): The system as claimed in claim 16, wherein the system is also provided with a data processing unit with which statistical information is generated from the operations performed with the control means.

Claim 21 (new): The system as claimed in claim 20, wherein the system is also provided with second storage means adapted to store the statistical information generated by means of the data processing unit.

Claim 22 (new): The system as claimed in claim 20, wherein the data processing unit connects to a control module with which the information displayed in the control room is transmitted.

Claim 23 (new): The system as claimed in claim 16, wherein the system is also provided with detection means for observing behaviour of an operator of the system.

Claim 24 (new): The system as claimed in claim 23, wherein the detection means connect to the storage means for storing the operations performed with the control means, which storage means are also adapted to store the information generated with the detection means.

Claim 25 (new): A method of visual surveillance, comprising the steps of:

- A) recording visual information by means of a plurality of cameras,
- B) feeding the recorded information to a control room,
- C) selecting by an operator for observation purposes of a part of the available information from the recorded information fed to the control room, and
- D) storing the information selected by the operator.

Claim 26 (new): The method as claimed in claim 25, wherein the information selected by the operator as according to processing step (D) is stored in relation to the selection behaviour applied for this purpose by the operator.

Claim 27 (new): The method as claimed in claim 25, wherein statistical information is generated from the selection behaviour.

Claim 28 (new): The method as claimed in claim 27, wherein the statistical information is used to actively influence the operator.

Claim 29 (new): The method as claimed in claim 25, wherein the control room for processing information recorded by the system can also be supplied with personal identification data.

Claim 30 (new): The method as claimed in claim 29, wherein the personal identification data are generated by linking visual information to another information source.
